Project 1:

For this project, your goal is to:

1. Create a working website, using **HTML**, **CSS**, and **Bootstrap**.

2. Your site must include:

    1. A working navbar with links.

        1. Links must be to other sections of the website or secondary pages (i.e. other pages you have built).
    2. At least one container with a working Bootstrap Grid system integration.

        1. Grid system must be integrated in such a way that there are **three** different variations for size **small (or extra small)**, **medium**, and **large (or extra large)**.
    3. Some biographical data (it doesn't really matter if it's factual or not). These section needs to make use of classes that **indent** and **justify** the text in some way. :

        1. An "about me" section.
        2. An "interests" section
    4. Your site must contain either a **table** or **list** of some kind that must be *stylized* in some way.

    Note:
    - **All code must contain proper usage of classes and ids.**
    - **If you take code from a site (such as w3Schools), be sure to properly cite it.**
